Rareprob Solutions Private Limited

Dehradun , India

- Developed and shipped 20+ Unity games including shooters, platformers, puzzles, and hyper casual titles for Android and WebGL.
- Implemented core gameplay systems such as knockback mechanics, jumping, collisions, physics based interactions, and puzzle logic using C#.
- Designed and integrated dynamic UI systems using Unity UI, Animator, and DOTween for menus, transitions, and in-game effects.
- Optimized game performance by reducing memory usage, draw calls, and load times, ensuring stable FPS on low-end devices.
- Integrated AdMob and Unity Ads, including rewarded ads, interstitials, and banner ads, contributing to in-game monetization.
- Implemented Firebase services including Analytics, Crashlytics, and Remote Config to track player behavior and manage live updates.

Present

Ares Studio (Contract)

Remote

- Contributed to a 3D casual game prototype, focusing on environment setup, lighting, and material tuning.
- Worked with Dreamteck Splines for path-based movement and level design.
- Assisted in maintaining visual consistency and performance across different 3D scenes.
- Built ad-focused game variants for Voodoo, adapting core gameplay into short, engaging experiences.
- Maintained visual quality while modifying mechanics for marketing needs.

Some Key Projects

• Findlyy (Find The Differences) - Native => [Link](#)

Casual puzzle game with multiple levels, polished UI animations, and ad-based monetization. Achieved 1M+ downloads on Google Play, demonstrating strong player retention and scalable level design.

• Hole King (3D Hole Game) - Native => [Link](#)

Physics-based 3D gameplay with object collection mechanics and advanced performance optimization techniques. Surpassed 100K+ downloads on Google Play, ensuring stable FPS and smooth gameplay across mid- and low-end Android devices.

• The Lost Color (2d Platformer) - WebGL => [Link](#)

2D platformer featuring shooting mechanics, AI driven enemy behaviors, smooth character movement, and optimized WebGL performance for browser play.

• Christmas Battle (2d Shooter) - WebGL => [Link](#)

2D tower defense-style shooter featuring multiple enemy types with distinct behaviors and wave progression systems. Implemented enemy spawning logic, health systems.
